Kevin Marks

SOFTWARE ENGINEER & FULL STACK JAVA DEVELOPER | BS IN COMPUTER SCIENCE

Houston, TX | k.z.marks15@gmail.com | 409-504-3701 | github.com/kevo15 | linkedin.com/in/aboutkevinmarks

Professional Summary

Full-stack developer with hands-on experience in Java, Spring Boot, React, TypeScript, AWS, and Google Cloud Platform, currently consulting for EY through SkillStorm. Oracle-certified in Java SE 8 and SE 17. I build secure, scalable applications, from microservices and relational data models to responsive web and mobile UIs, and turn user pain points into simple solutions people love. Eager to own features end-to-end and measurably improve performance, reliability, and UX.

Experience

SkillStorm | Full Stack Java Developer | April 2026 – Present

Consultant to Ernst & Young LLP (EY), Consulting practice | August 2026 – Present

Client Engagement & Staffing Platform

Java, Spring Boot (microservices), Spring Security, Spring RestClient, RabbitMQ, AWS (EC2, Elastic Beanstalk, RDS, S3, CloudFront), Docker, Amazon ECR/ECS, GitHub Actions, JUnit, Vitest/Jest

- Designed three independently deployable Spring Boot microservices (Client, Engagement, Staffing), each owning its own Amazon RDS database, with role-based access distinguishing Engagement Managers from Consultants.
- Implemented cross-service validation with Spring RestClient and asynchronous staffing events with RabbitMQ, decoupling notification and status-update logic from the core assignment workflow.
- Containerized services with Docker, published images to Amazon ECR, and deployed through Amazon ECS with an automated GitHub Actions CI/CD pipeline.
- Validated CRUD operations, role-based access boundaries, and resilience to downstream failures with per-service JUnit suites and a Vitest/Jest frontend suite.

Personal Retirement Goal Planner

Java, Spring Boot, Spring Security, JWT, PostgreSQL, AWS (Elastic Beanstalk, RDS, S3, CloudFront), HTML/CSS/JavaScript, JUnit, Vitest/Jest

- Delivered a fully authenticated, multi-user retirement planning platform with strict per-user data isolation, deployed end-to-end to AWS (Elastic Beanstalk, RDS, S3 + CloudFront).
- Implemented stateless authentication with Spring Security and JWT, including a custom token-validation filter, HMAC-signed tokens, and BCrypt password hashing.
- Modeled goals, funding sources, and contributions in PostgreSQL with Spring Data JPA, enforcing authorization at the service layer to prevent cross-user data access.

Investment Goal Tracker - github.com/kevo15/investment-goal-tracker

Java, Spring Boot, PostgreSQL, HTML/CSS/JavaScript

- Built a full-stack goal tracker for Retirement, Home Purchase, College Savings, Wealth Accumulation, and Emergency Fund goals with priority levels, target dates, and a sortable dashboard.
- Implemented configurable block/warn validation for past-dated targets and negative values; followed SOLID and DRY principles with full JavaDoc and JSDoc documentation.

ArkaTech | Software Engineer Intern/I | January 2024 – December 2025

PolitiMap Platform - https://politimap.vercel.app/

- Improved sign-in completion and onboarding by engineering a secure, user-friendly login with inline validation, reducing friction and cutting down on password-reset requests.
- Delivered smoother search scale by optimizing complex MongoDB/Mongoose queries and indexes, decreasing perceived wait time and stabilizing performance under heavy load.
- Increased relevance and engagement by building real-time search APIs on MongoDB, enabling instant results.

PremierLeaf Wellness Suite - https://www.pmleaf.com/

- Enabled better habit adherence and tracking by delivering a full-stack React Native app for managing self-care sprints.
- Reduced overhead maintenance by designing and documenting a clear architecture component hierarchy, data flow, and conventions so features ship faster and stay consistent.
- Improved content reliability and privacy by implementing secure media uploads to Google Cloud Storage with in-app file management, simplifying asset handling for users.

Projects

Shadow Sprinter | 2D Platformer Game | Personal Project (KmGameForge)

- Designing a mobile-first 2D action platformer with unique shadow-clone mechanics using React Native & Expo, now in closed beta on Google Play with 30 levels.
- Implemented physics-based player movement, enemy AI, and real-time collision detection.
- Integrated animations, sprite systems, and shadow clone replay mechanics to create puzzle-solving gameplay.

Personal Website | Personal Project - https://kevin-portfolio-delta-eight.vercel.app/

- Built a responsive Next.js and TypeScript site with a custom Material UI theme to showcase my projects, experience, and games, deployed on Vercel.
- Designed reusable, mobile-first UI components with accessibility, reduced-motion support, and statically generated case study pages.

Education

B.S. Computer Science | May 2025

Prairie View A&M University

Certifications

- Oracle Certified Professional: Java SE 17 Developer
- Oracle Certified Associate, Java SE 8 Programmer
- Spring Certified Professional (in progress)

Skills & abilities

Technical Skills

- Java, JavaScript/TypeScript, Python, SQL, HTML/CSS
- Spring Boot, Spring Security, Spring Data JPA, Node.js, GraphQL, REST, RabbitMQ
- React, React Native/Expo, Next.js, Material UI, Tailwind CSS
- PostgreSQL, MongoDB, AWS, Google Cloud Platform
- Docker, Amazon ECS/ECR, GitHub Actions, JUnit, Vitest/Jest, Git, Jira

Professional Skills

- Full-Stack Development & System Architecture
- Microservices & Distributed Systems
- Cloud Storage & Database Management
- Agile Project Management & Collaboration
